

360° Property Assessment

Our pest control service starts with the most important step, a full inside and outside assessment of your home. This helps to identify possible cracks and crevices where pests are getting in such as:

- Utility Openings
- Window Frames & Trim
- Door Sweeps
- Siding Gaps
- Soffit Openings
- Vents

Pests can cause undue stress both emotionally and physically by damaging your property or causing health issues, including: contaminated food, the spread of germs, poisonous stings or even affecting and promoting allergies.

Additional Pest Control Services

In addition to our Four Seasons Pest Control program, here are a few other services we can provide in order to help make your home and property a pest free environment!

WILDLIFE CONTROL	Includes removal, exclusion & clean up of raccoons, skunks, squirrels & more.
BIRD CONTROL	Includes removal, exclusion & deterrents.
FLEA & TICK CONTROL	Control fleas & ticks in & around your home.
BED BUG CONTROL	Eliminates & prevents a bed bug infestation.
MOSQUITO CONTROL	Reduces the mosquito population by affecting resting & breeding sites.
COMMERCIAL PEST CONTROL	Fully customizable programs for all building types.

FOUR Seasons PEST CONTROL

855-878-7859
skedaddlepest.com

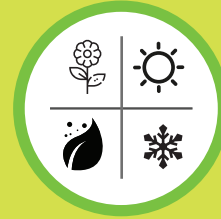

Spring Service: March - May

Spring is a time for rejuvenation when insects strive to increase their populations. Skedaddle concentrates on material application that reduces insect reproduction. The treatment focuses on the exterior of the structure where insects may seek out entry points into the living space and harbourage areas where insects live and breed.

When the temperature starts to drop, the structure is a very viable harbourage for insects. Our technicians will establish a barrier around the home, to reduce the occurrence of pests entering the home seeking winter shelter.

Fall Service: September - November

FOUR SEASONS

Here are the pests our Four Seasons Pest Control Plan protects you from:

- Mice
- Rats
- Ants
- Bees
- Cockroaches
- Spiders
- Hornets
- Earwigs
- Sow Bugs
- Wasps
- Centipedes
- Crickets
- Millipedes
- Silverfish

Summer Service: June - August

Insects are most active in the summer and the young born in the spring are now maturing. At this point, insect pressure is very high as these critters search for food sources and harbourage. This is the ideal time to treat in harbourage areas where insects live.

During the winter service, our focus is on eradicating insects that are taking or will take refuge inside the home. The technician is establishing a long-term approach using naturally occurring products to protect the interior of the home against insect invasion throughout the year.

Winter Service: December - February

Three-Zone Service Overview

The success of our Four Seasons Pest Control program is the targeting, treatment and monitoring of the three zones around your home and property.

Following the initial treatment, seasonal visits, and any necessary spot checks, you will enjoy a pest free environment.

**RED
ZONE**

The Red Zone is the interior of the home, where pests have the greatest potential impact on quality of life and Skedaddle has zero tolerance for pests inside your home.

**YELLOW
ZONE**

The Yellow Zone is the exterior of the structure and the immediate perimeter where insects seek out entry points into the living space.

**GREEN
ZONE**

The Green Zone is those insect harbourage areas around the structure and in the yard, such as patios and flower beds, that encourage insect breeding activities.
